

# CDR Vehicle List - CDR Software v3.4

## Important Information about Vehicle Coverage

**BOSCH**

Invented for life

The Bosch Crash Data Retrieval Software and Hardware products support the retrieval of crash data from Airbag Control Modules (ACM), Roll-over Sensors (ROS) and Powertrain Control Modules (PCM) installed in vehicles listed in this document as indicated by the markings in the column labeled "Module".

Many vehicles listed in this document include references to manufacturer specific notes which may indicate limitations in CDR product coverage. Make sure that you read the reference notes prior to determining if a vehicle is supported.

Bosch takes all reasonable actions to ensure the CDR System supports production vehicles (US and Canada) as listed in the CDR product documentation. However, due to (but not limited to) the availability of information at the time the product is developed, Bosch cannot guarantee 100% coverage of the supported vehicles listed in the documentation.

In the event that a vehicle coverage exception is found, Bosch Tech support will document the issue and Bosch will attempt to resolve it in a future release. If you are experiencing trouble retrieving event data from any of the vehicles listed in this help file please contact technical support for further assistance.

The numbers below coincide with the note reference numbers called out in the list of supported Chrysler vehicles.

1. For console mounted shifter, center tunnel before or aft of shifter. For column mounted shifter, center stack.
2. Vehicles equipped with side airbags can be read out by the CDR tool. Vehicles not equipped with side airbags might be read out by the CDR tool.
3. For model year 2006, some Chrysler 300, Dodge Magnum, Dodge Charger, Dodge Dakota, Jeep Grand Cherokee, and Jeep Commander models may contain EDR data that can not be read by the CDR tool.
4. Crash data is recorded for **FRONTAL DEPLOYMENTS ONLY** on these vehicles.
5. When downloading these modules using the provided CDR cable, plug the cable into the CDR Interface Module, apply power and wait at least 1 minute after power is applied before collecting data. Failure to do so may cause an error during download.
6. Retrieval of crash data through the vehicle's DLC connector may not be supported on some early 2008 model year vehicles of this type. For these vehicles, the CDR application will display an error message after attempting a DLC download and instruct you to connect directly to the ACM module using the specified cable.
7. For model year 2007, some PT Cruisers may contain EDR data that cannot be read by the CDR tool
8. For model year 2009, Dodge Ram 1500 models have the capability to store pre-crash data for both deployment and non-deployment events.
